2009 Graduating Student Survey Results

EXECUTIVE SUMMARY

TAMU-CC students who applied for graduation for the 2008-2009 academic year were invited to participate in a Graduating Student Survey to offer input about their experiences at the University. Participation in the questionnaire was voluntary and anonymous. Both undergraduate and graduate students with valid email addresses who applied for graduation by the posted deadlines between the three semesters of the academic year were invited to participate. There were **809** total students that completed the online survey, which equates to **41.5%** of the graduating students for the 2008-2009 academic year (n=1,950).

Methodology

In an administrative change from previous years, students were no longer able to apply for graduation via the TAMU-CC SAIL system, where they had been offered the opportunity to participate in the Graduating Student Survey as part of the application process. Instead, the Dillman method, which employs multiple contacts with the potential respondents, in this case via email, was used each semester to contact the students who had applied for graduation with their Academic Advisors. Five contacts were used in the Fall and Spring, while there were four contacts in the summer due to time constraints. The survey was deployed online using Inquisite 8.0 software, and data were stored on a secure Oracle server. Data were analyzed using SPSS 15.0.

Reporting

For navigational ease, key findings are grouped into separate categories by theme/construct. Statistical analyses with AY 07-08 data were conducted using independent samples t-test. Levene's test was used to assess equality of variance between the two survey years. When equal variances could not be assumed, modified procedures were applied to account for the inequality.

College/Division units should strive to obtain an overall positive combined rating of 75% for each item assessed. To determine the overall positive combined rating for each item assessed, the Office of Planning and Institutional Effectiveness recommends combining the percentage scores received for "Very Satisfied"/"Satisfied" or "Major Impact" and "Moderate Impact" Likert-type scale options, as these responses indicate a positive response conveyed by the student assessing the item. Each item's combined positive score is highlighted in the individual frequency tables. The previous year's combined positive ratings are also included with each frequency table, as well as the results of the statistical analyses. Administrators can notate results of the Graduating Student Survey as a secondary source of evidence when assessing their division/department's performance or level of effectiveness.

KEY FINDINGS

Demographics

The demographic composition of the respondent population is fairly representative of the student body population by gender and race (within 5% of campus population). The survey population was also fairly representative of the campus population, with the exception of the College of Liberal Arts, which was slightly overrepresented.
